Qlarm 2.72.0

November 3, 2021

What's New:

- When a new user is added from the Users View, an invitation email is sent to the new user. Upon following the link in the invitation email, the user is redirected to the Qlarm's registration form to complete the registration after which he's able to login to Qlarm without any additional steps.
- In the Events view, when an Inactive event is acknowledged it is directly moved in the History Tab.
- In the Trend view, the existing button for receiving or pausing live data for the displayed tags is now replaced with a toggle button that makes it obvious if live data is being received and displayed in the chart.

Bug Fixes:

- Small but significant improvements and fixes were made across the application.
